The Middle East & Africa radioactive tracer market was valued at US\$ 268.57 million in 2022 and is expected to reach US\$ 602.69 million by 2030; it is estimated to grow at a CAGR of 10.6% from 2022 to 2030.

Increasing Use of Nuclear Imaging Techniques fuel the Middle East & Africa Radioactive Tracer Market

PET and SPECT are among the nuclear medicine radiology modalities employed in clinical settings. Their use is increasing as they offer accurate detection, localization, and characterization of diseases. Ionizing radiation for diagnosis and treatment benefits millions of patients globally. Radiation in medicine helps earlier diagnosis and often offers less invasive treatments for human diseases. Advanced radiation technology has opened new horizons in diagnostic and nuclear medicine, radiotherapy, and interventional radiology. According to World Health Organization, over 3,600 million diagnostic radiology examinations are performed, 37 million nuclear medicine procedures are carried out, and 7.5 million radiotherapy treatments are given annually. The development and introduction of new radiopharmaceuticals for PET/CT and SPECT/CT procedures, which are used in novel clinical applications such as neurology and orthopedics, and the growing accuracy of different tumor staging methods contribute to the growth of the radioactive tracer market. For instance, newly introduced cardiac radiopharmaceuticals such as flurpiridaz F-18 and ammonia N-13 help in more precise imaging of cardiovascular conditions. Thus, constant technological advancements for improving the quality and efficacy of nuclear imaging techniques favor the growth of the radioactive tracer market.
