## **Abstracts**

The nonwovens for energy applications market size was valued at US\$ 10.92 million in 2023 and is projected to reach US\$ 104.73 million by 2031; it is estimated to register a CAGR of 32.7% from 2023 to 2031.

Based on application, the market is segmented into battery, fuel cell gas diffusion layer (GDL), PTL, and wind energy. The fuel cell gas diffusion layer (GDL) segment held the largest share in 2023. The fuel cell gas diffusion layer (GDL) segment held the largest share of the global nonwovens for energy applications market in 2023, and it is expected to record a significant CAGR during the forecast period. Carbon nonwoven is widely used as a substrate for fuel cell gas diffusion layer (GDL). The gas diffusion layer is a thin, porous layer positioned between the electrode and reactant gas flow field in fuel cells or electrolyzers. Nonwoven used in the gas diffusion layer is, responsible for water management, as well as providing structural support and reactant transport. The substrate made of nonwoven is one of the critical components for performance in fuel cells, and acts both as the functional and the supporting structure for membrane electrode assembly.

Asia Pacific held the largest market share for nonwovens for energy applications in the year 2023. This is attributed to the increased demand from the food & beverage industry. As battery technology continues to improve, Asia Pacific is expected to

become a key hub for new energy vehicle production. China has emerged as one of the largest electric vehicle markets worldwide, supported by government policies promoting electric vehicles. According to the China Association of Automobile Manufacturers, ~6,000 fuel-cell electric vehicles were sold in China in 2023, a year-on-year rise of 72%. Several economies in Asia Pacific plan to expand the new energy vehicle industry in accordance with the government to support fuel cell electric vehicle growth in the region in the coming years. According to the hydrogen development plan released in 2022, China has set a goal to put 50,000 fuel cell vehicles on its roads by the end of 2025.
