Abstracts

The North America carboxy therapy market is expected to grow from US\$ 36.35 million in 2022 to US\$ 72.69 million by 2028. It is estimated to grow at a CAGR of 12.2% from 2022 to 2028.

Surging Geriatric Population and Increasing Demand for Antiaging Treatments is Driving the North America Carboxy Therapy Market

The frequency of people aged 65 or above is likely to increase from 1 in 11 in 2019 to 1 in 6 by 2025. According to the WHO, the percentage of people aged 60 and above is estimated to reach 22% by 2050 from 12% in 2015. Therefore, a significant increase in the geriatric population and changes in beauty standards on a regional level have increased the demand for antiaging treatments to reduce fine lines and wrinkles, which helps maintain younger-looking skin for a long time. Aging is an inevitable phenomenon. There has been increased awareness about aesthetics, significantly fueling the demand for antiaging treatments. Additionally, an increase in the geriatric population has created a demand for various types of antiaging and skin rejuvenation treatments. Carboxy

therapy ensures the maximum absorption of nutrients and provides healthy skin. Moreover, there has been increased awareness among a large population about personality and appearance, along with the surge in disposable income, which has increased the use of beauty treatments, aiding the North America carboxy therapy market growth.

North America Overview

North American market for carboxy therapy consists of the US, Canada, and Mexico. The North America carboxy therapy market accounted for the largest market share in 2021, owing to various factors such as an increase in demand for antiaging treatments and a surge in non-invasive cosmetic procedures. Moreover, the rise in demand for aesthetics procedures and the constant increase in the geriatric population have driven the market. Additionally, an increase in application areas for carboxy therapy is likely to create ample opportunities in the coming years. As per ASAPS 2020, 15.6 million cosmetic procedures were recorded in 2020, which included approximately 2.3 million cosmetic surgical and 13.2 million cosmetic minimally invasive procedures. In addition, according to the International Society of Aesthetic Plastic Surgery report, 174,300 photo rejuvenation procedures were performed in 2020 in the US. Additionally, the increased application of carboxy therapy in medical fields such as neurology, gynecology, and urology is expected to contribute significantly to the growth of the carboxy therapy market. Therefore, rising number of aesthetic procedures and increasing expenditures are likely to support the market growth and expected to offer ample revenue growth during the forecast period.
