## Abstracts

The South & Central America FGD gypsum market was valued at US\$ 115.32 million in 2022 and is expected to reach US\$ 151.50 million by 2030; it is estimated to grow at a CAGR of 3.5% from 2022 to 2030.

### Rising Preference for Gypsum Board in Construction Industry fuel the South & Central America FGD Gypsum Market

A gypsum board, also known as a drywall panel, is preferred over plaster since it is easier to install and repair, less expensive, and more durable. It takes less time to mount and is also widely available. Fire-resistant properties and feasibility of utilization are common factors increasing the use of gypsum in residential and nonresidential construction activities. Gypsum boards are widely used as a substitute for wooden panels and concrete walls in modern buildings and interiors, as they can be installed easily and quickly. Gypsum boards also contain recycled content such as Flue Gas Desulfurization (FGD) gypsum. FGD gypsum boards are extensively used as a finishing material in the construction of modern buildings—mainly for ceilings, partitions, and interior walls. Also, they are lightweight, flexible to use, cost-effective, and durable. These panels are available in different colors and varieties such as regular, green board, blue board, purple, paperless, type X fire-resistant, and soundproof drywall, which helps add desirable and luxurious aesthetics to the interiors of a building. In addition, drywall panels comply with all the requirements for design in architecture, thus preferred over other construction materials. The rising preference and utilization of gypsum boards in residential, commercial, industrial, and utility spaces, owing to their

advantages such as low cost, ease of installation, fire resistance, non-toxicity, sound attenuation, and availability is contributing to the FGD gypsum for drywall market growth.

## South & Central America FGD Gypsum Market Overview

South & Central America is significantly investing significantly in green and sustainable construction. According to the US and the Brazilian Green Building Councils, Brazil accounted for more than 1.2 million square meters of certified buildings, thereby ranking seventh in Leadership in Energy and Environmental Design (LEED) registrations worldwide in 2021. According to the International Trade Administration, the Argentine government is focused of infrastructure projects in the range of US\$ 20 million. The augmented focus on construction activities and infrastructure development is driving the demand for construction materials drywall panels, wallboard, cement and other sustainable building materials. FGD gypsum is widely used synthetic gypsum for construction applications such as production of drywall, wallboard, and cement. Therefore, rising investment in construction activities and growing demand for sustainable construction materials in the region is expected to drive the FGD gypsum market.
