Abstracts

The South & Central America lung cancer screening market is expected to grow from US\$ 39.16 million in 2022 to US\$ 68.95 million by 2030. It is estimated to grow at a CAGR of 7.3% from 2022 to 2030.

High cost of lung cancer screening tests fuel South & Central America lung cancer screening market.

Amid growing healthcare awareness in the region, lung cancer screening providers in the region has ample opportunities. These include collaborating with regional hospitals and clinics through which they can offer accessible lung cancer screening and leveraging telemedicine for remote areas. This approach not only detects lung cancer early but also improves patient outcomes, filling a crucial gap in the region's healthcare. By aligning with the rising demand for preventive care, these providers can establish a foothold in a promising market, ultimately contributing to enhanced public health and well-being across the region.

South & Central America Lung Cancer Screening Market Overview

The South & Central America lung cancer screening market is segmented into the Brazil, Argentina, and the Rest of South & Central America. The regional growth is attributed to various factors, such as the increasing incidence of lung cancer and growing awareness of lung cancer screening among people. Also, rising government support for screening has led to the further growth of the market.

The lung cancer screening market is being influenced by factors such as the increasing prevalence of cancer. For instance, as per Globocan 2020 report, lung cancer is Brazil's second most prevalent cancer. There were 88492 new cases of lung cancer found in Brazil.

Lung cancer screening is believed to be the standard of care worldwide. In Brazil, complications in its implementation related to the organization of the health system, access to CT scans and treatment methods, and cultural acceptance of the method restrict the process. There are challenges and barriers in carrying out the screening according to the local organization; however, it was possible to obtain satisfactory results in all scenarios.

According to Lung Cancer Policy Network, In Brazil, a coordinated approach to lung cancer screening is necessary, as health assistance is fragmented across the country and has resulted in significant health inequalities. The advantages of LDCT screening were recently described in the Second Brazilian Early Lung Cancer Screening Trial (BRELT2). Nevertheless, there are still many barriers to overcome before an organized screening program can be implemented nationwide, including inequitable access to screening equipment between public and private healthcare. To manage this challenge, as part of the Propulm?o Mobile Project, the municipal health office in Barretos (S?o Paulo) collaborated with the local cancer hospital to deliver mobile LDCT screening and a smoking cessation intervention in the community.
