Incorporation of Platelet-Rich Plasma in Regenerative Medicine to Provide Lucrative Opportunities to South & Central America Platelet-Rich Plasma (PRP) Tube Market in Coming Years

Regenerative medicine is a major part of the rapidly emerging biomedical research that involves the development of new therapeutic strategies, resulting in significant medical advancements. Peripheral nerve injuries (PNIs) have become common, as a large number of cases are reported every year, and the slow regeneration process post these injuries leads to loss of nerve functions. Considering this, research on the mechanism of peripheral nerve regeneration has flourished worldwide, and scholars are seeking different methods to enhance the regeneration process. PRP therapy incorporates mainstream technologies for repairing and rejuvenating the tissues damaged due to

injuries or chronic diseases. Evidence has shown that micro-needling and topical application, along with PRP, improves collagen production and skin tightening during vampire facials. According to the 'Combined micro needling with topical application of platelet-rich plasma versus micro-needling alone in the treatment of stria distensae,' a report published in 2020, MN-PRP was associated with excellent recovery of Striae distensae (SD) skin lesions, more significant deposition of collagen and elastic fibers, increased proliferative activity in epidermis, and decreased caspase-3 protein expression values in epidermis. PRP application has also been explored in the treatment of skin pigmentation disorders and acne scars. In hair transplants, PRP can bind to growth factors and boost the proliferation of human derma papilla cells, leading to the formation and maintenance of hair follicles. PRP contains platelets in a concentrated form. A high concentration of platelets can release various growth factors after activation, thereby promoting the proliferation and differentiation of tissue cells as well as accelerating the tissue regeneration process. PRP therapy is also utilized for musculoskeletal regeneration to heal sports and orthopedic-associated injuries. Thus, PRP injections are gaining popularity in regenerative medicine owing to their ability to accelerate tissue regeneration, which is likely to provide lucrative opportunities for the platelet-rich plasma (PRP) tube market in South & Central America in the coming years.

South & Central America Platelet Rich Plasma Tube Market Overview

PRP is a relatively new treatment modality for various medical and cosmetic procedures. It can be used to rejuvenate skin and promote cell renewal. Brazil had almost 1.5 million surgeries and one million non-surgical procedures in 2019. Liposuction (15.5%), breast augmentation (14.1%), and abdominoplasty (10.4%), as well as eyelid surgery and buttocks augmentation, were the most popular procedures. Most of the cosmetic surgeries were performed on people from the age group of 18–35. A PRP tube is often used with other cosmetic procedures, including surgeries, to improve the results and promote faster healing, soft tissue healing, and, in the process, activation of new cells generation.

South & Central America Platelet Rich Plasma Tube Market Revenue and Forecast to 2028 (US\$ Million)

South & Central America Platelet Rich Plasma Tube Market Segmentation

The North America platelet rich plasma tube market is segmented on the basis of usage, volume, end user, and country.

Based on usage, the South & Central America platelet rich plasma tube market is segmented into skin rejuvenation, hair restoration, orthopedics, surgical oncology, gynecology, and others. In 2022, the others segment accounted for the largest market share. The skin rejuvenation segment is further subsegmented into scars, skin aging, acne, skin ulcers, and others.

By volume, the South & Central America platelet rich plasma tube market is segmented into less than 5 ml, 6 ml to 10 ml, and more than 10 ml. In 2022, the more than 10 ml segment accounted for the largest market share.

The South & Central America platelet rich plasma tube market, in terms of end user, is segmented into MedSpas, dermatology offices, hospitals and healthcare practices, tricologist practices, and others. In 2022, the hospitals and healthcare practice segment held the largest share of the market.

Based on country, the South & Central America platelet rich plasma tube market is segmented into Brazil, Argentina, the Rest of South & Central America. In 2022, Brazil segment registered a largest share in the South & Central America platelet rich plasma tube market.

AdvaCare Pharma USA LLC; ADVIN HEALTH CARE; BIO-X; Lingen Precision Medical Products Co Ltd; and Manso Medical Co Ltd are the leading companies operating in the South & Central America platelet rich plasma tube market.
