The US SCADA system market was valued at US\$ 6,170.50 million in 2022 and is projected to reach US\$ 9,050.86 million by 2028; it is estimated to grow at a CAGR of 6.6% during the forecast period. The Japan SCADA System market was valued at US\$ 1,882.24 million in 2022 and is projected to reach US\$ 3,092.34 million by 2028; it is estimated to grow at a CAGR of 8.6% during the forecast period.

Like all modern technologies, the standards for SCADA software and hardware are rapidly evolving. Technological advancements in SCADA systems are expanding the range of, both, systems and monitoring methods available. A few of the latest/ongoing advancements related to SCADA systems or their applications are mentioned below.

Subscription/Flex Licensing: Traditionally, municipal water and wastewater systems had to purchase SCADA software, and high purchase costs and limited budgets made it difficult for them to opt for necessary upgrades. On the contrary, many SCADA companies now offer subscription and flex licensing options, allowing utilities to lease SCADA software licenses at a fraction of the purchase cost.

High-Performance HMI: High-performance HMIs allow for pre-attentive processing and improves situational awareness. With gradual improvements, these HMIs choose to optimize process areas where better graphics make the most sense, alongside allowing for a more consistent SCADA application.

Virtualization: Virtualization servers allow a single computer to run multiple operating systems at the same time. It reduces capital and operating costs; creates more streamlined systems; allows for system redundancy; minimizes or eliminates downtime; and increases IT productivity, efficiency, agility, and responsiveness.

Such advancements in SCADA systems are bringing significant trends in the US and Japan SCADA system market.

Manufacturing industries play an essential role in the economic and socioeconomic development of any country. Moreover, the continuous growth of manufacturing industries drives industrialization, which subsequently leads to urbanization in many countries. SCADA systems are commonly used in manufacturing industries; they are an integral component in virtually all industrial plants and production facilities. The system composes hardware and software components used to monitor and control industrial processes. SCADA systems allow manufacturers to collect and analyze real-time production data, monitor and manage alarms, and program automatic control responses that are triggered by certain events or system parameters. The remote monitoring ability of SCADA systems helps manufacturing industries keep a keen eye on their processes

in areas that are inaccessible or harmful for manual operations. A SCADA system controls a whole manufacturing plant operation, ensuring all systems run smoothly and productivity targets are met.
