Global Converged Infrastructure Market: Overview

A converged infrastructure gives IT, a suite of best infrastructure components from several vendors in one hardware stack. Thus, the various companies have to work with one vendor than multiple vendors in order to delivery single solution that constitute storage, servers, networking and software capabilities. Private clouds based on a converged infrastructure provide economies of scale, and necessary security for the protection of business-critical applications as well as data. Moreover, the converged infrastructure platform influences virtualization for providing private-cloud computing solutions to end-users effectively and quickly. With the help of converged infrastructure, the organizations can access a single platform that contains all the resources which deliver scalability, flexibility and collaboration system. In addition, various data center enterprises across various regions especially in U.S, Germany, U.K and China among others are witnessing significant growth due to the rising spending on IT infrastructure development in coming years. Additionally, the specific design of a converged infrastructure solution should make it easy to scale a virtualization environment to support all critical workload applications. Thus, the global converged infrastructure market is expected for a steady growth rate during the projection period of 2017 to 2025.
