Polyaluminium chloride is a polymer with a molecular formula of AlCl_3 . This synthetic polymer is freely soluble in water and is characterized by strong absorptivity. The hydrolysis process is accompanied by such reactions as sedimentation, adsorption, and agglutination.

The process of polyaluminium chloride production includes three stages – feeding, reaction and filtration. Depending on reaction conditions, products with different characteristics are obtained. For the production of polyaluminium chloride 9% special auxiliaries and catalysts are used.

Polyaluminium chloride is increasingly used as a flocculant for drinking, industrial and urban waste water treatment; in paper manufacturing; precision casting; textile industry; refineries, food processing; in automotive, ceramic, pharmaceutical and daily chemical industries, in carwash installations and laundries.

The product may be hazardous to humans. It may cause eye, skin, and gastrointestinal respiratory irritation. Nausea, vomiting and diarrhea are the side effects of polyaluminium chloride ingestion.

Polyaluminium chloride is produced by such companies as Mare Austria GmbH; Eka Chemicals OY; Feralco Iberia, s.a.u.; Akzonobel Industrial Chemicals; Shanghai Jinshan Pharmaceutical Co., Ltd; Sitara Chemical Industries Ltd., among many others.

Polyaluminium chloride is covered in the study Polyaluminium Chloride (liquid/solid) (CAS 1327-41-9) Market Research Report 2013. The report encompasses proper description of the product, unveils application areas, and briefly summarizes patents in the sphere. It overlooks polyaluminium chloride market situation, names manufacturers, suppliers as well as users. The report also provides current polyaluminium chloride prices.
