Astaxanthin is an organic red-colored carotenoid pigment with the molecular formula $C_{40}H_{52}O_4$. This natural nutritional component can be found in aquatic plants, microalgae, red yeast, and even in the feathers of some birds. The structure of astaxanthin was proved by the group led by Professor Basil Weedon in 1975.

Astaxanthin, owing to its health-supporting properties, is a main focus of researchers and a large number of pre-reviewed scientific publications.

Astaxanthin is deemed to be a miracle nutrient, which increases cellular energy, reduces inflammation, improves the immune system, strengthens muscles, prevents or halts the progression of diabetes, etc.

Astaxanthin is utilized as an antioxidant; therefore, it offers powerful free radical scavenging properties and protects the body against lipid peroxidation and oxidative damage of LDL-cholesterol, cell membranes, cells, and tissues. Being a natural suppressor of NF- κ B activation, the carotenoid protects skin from oxidative and ultraviolet damage.
