About

Pigment yellow 184, also known as bismuth vanadate, is an intense, bright yellow-greenish inorganic pigment with the chemical formula BiO₄V. It is melting at above 1000?°C. The pigment is characterized by high tint strength, excellent lightfastness, as well as strong acid, weather and heat resistance.

Pigment yellow 184 generates very bright tone colors with high chroma and covering power if combined with organic pigments. Even small amount of organic pigment has a strong impact on the color tone.

Pigment yellow 184 is used in the manufacture of general industrial, automotive, water based, powder and coil coatings. The product is also extensively used in the plastics industry due to its high temperature stability. Given its high resistance qualities, pigment yellow 184 is suitable for varnish production.

BASF and Bayer are the world dominant suppliers of pigment yellow 184. Other participants of the pigment yellow 184 market include but are not limited to Habich GmbH, Kremer Pigmente GmbH & Co. KG, Clariant Chemicals, Kikuchi Color & Chemicals Corporation, Cappelle Pigments, HUPC Chemical Co., Hangzhou Sage Chemical Co., Nubiola Pigmentos, S.L., Heubach GmbH, and Bolycolor International Limited.

The Pigment yellow 184 market is covered in the study Pigment yellow 184 (CAS 126729-57-5) Market Research Report 2023. The report encompasses proper description of the product, unveils application areas, and briefly summarizes patents in the sphere. It overlooks pigment yellow 184 market situation, names manufacturers, suppliers as well as users. The report also provides current pigment yellow 184 prices.
