Squalane is a natural hydrocarbon and triterpene. This substance can be found in a large number of sources, for example, plants (olives) and animals (shark liver). Also its an important part of human sebum.

Squalane should not be confused with squalene. Squalene is similar to squalane: both of them can be found in nature and have resembling properties, but they differ.

Squalane used in cosmetics for emollient, moisturizing of skin, in hair treatment in the role of conditioner and as a component of protective lip care stick due to its chemically inert nature. Thanks to its moisturizing properties, squalane is able to prevent the appearance of wrinkles and fine lines.

Squalane is also able to protect skin from UV radiation. Many companies use it as a part of sunblock creams and sprays. Several studies, some of which were published in the "Journal of Toxicological Sciences" confirmed the ability of squalane to protect the skin against environmental factors.

Due to its low toxicity and safety for human squalane is very popular ingredient of cosmetics and even used in the expensive creams and lotions.

Squalane market is covered in the study Squalane (CAS 111-01-3) Market Research Report 2025. The report encompasses proper description of the product, unveils application areas, and briefly summarizes patents in the sphere.
