Disodium Succinate is a white crystalline powder with the chemical formula $C_4H_4Na_2O_4$. It is readily soluble in water (>100 g/L at 25 °C). The chemical occurs in two forms: the crystal form (hexahydrate) and the anhydrous form (anhydrous).

In Japan, disodium succinate is manufactured as hexahydrate and is widely applied as a seasoning agent or as a feedstock for plating reagent. As a food additive, it is added to sake, soy sauce, ham, wasabi, boiled fish paste and cracker.

In Europe, disodium succinate is not approved as a food additive, but it is registered as a flavoring agent. As a taste enhancer, it is compatible with all types of seasonings and savory flavors. It is used in the preparation of “surimi” foods, sauces, bean paste, vinegar and canned seafood. If used together with monosodium glutamate, disodium succinate deepens and enhances the deliciousness; furthermore, it softens other strong tastes such as acid or salt.

Worldwide disodium succinate is not only known as taste enhancer, but also is used in the manufacture of plating agents, surfactants, biodegradable polymers, bath products and photochemicals.

Most prominent participants of the disodium succinate market include but are not limited to Finetech Industry Limited, Dr. Paul Lohmann GmbH KG, Merck Schuchardt OHG, Atomax Chemicals Co., Ltd., Dr. J. Pharmachem, Spectrum Chemical Mfg. Corp., Jost Chemical Co., Samanta Organics Pvt. Ltd., and AIPU Food Industry Co., Ltd.

The disodium succinate market is covered in the study Disodium Succinate (CAS 150-90-3) Market Research Report 2013. The report encompasses proper description of the product, unveils application areas, and briefly summarizes patents in the sphere. It overlooks disodium succinate market situation, names manufacturers, suppliers as well as users. The report also provides current disodium succinate prices.
