Abstracts

Global Baby Diapers Market is estimated to reach \$72 billion by 2024; growing at a CAGR of 5.1% from 2016 to 2024. Diaper is commonly worn by infants as underpants and is made from layers of absorbent materials. Consumers now prefer diapers that majorly support personal hygiene of babies that would-be baby-friendly and causes less damage or irritation to the skin of infants. Over the years, technological advancements have aided in developing modern disposable diapers consisting of specially designed layers made-up of fibers that would absorb liquid and retain for longer durations. A novel diaper consists of features such as solutions for skin breathability, pH of the diaper and skin hydration. Major companies are collaborating with research centers for developing diapers with maximum biodegradability to prevent environment contamination and diapers with barrier creams to provide better skin care for infants.

Growing demand for baby pants, increasing awareness among consumers about hygiene of babies, rising various promotions and advertisements and enhancements in raw material used for producing diapers are the factors boosting the growth of the global baby diapers market. Furthermore, market expansion, development of smart diapers and eco-friendly diapers may provide market prospects in coming years. Though, its

ability to release volatile organic compounds and high cost of these diapers may restrain the growth of the market.
