Abstracts

Global Dairy Alternatives Market is estimated to reach \$28,745 Million by 2025; growing at a CAGR of 13.1% from 2017 to 2025. Dairy alternatives are lactose free products which are used as a replacement of dairy based products. Dairy alternatives are majorly adopted from various cereals such as wheat, oat, nuts, rice and barley. People who are lactose intolerant and milk allergic are consuming these alternatives with great ecstasy. Due to the low fat content and cholesterol concentration in dairy alternative products, their demand is rising at a rapid pace all over the world. Usually extracted from plant based sources they are widely available in supermarkets including in various milk options such as almond, coconut, soy and many others. The global dairy alternative market is also gaining a high demand from the rising health awareness among consumers.

Nutritional benefits such as low cholesterol content, high protein content, and growing consumer preference for a vegan diet are the key drivers boosting the global dairy alternative market. In addition, rising number of dairy allergic and lactose intolerant consumers have also fueled the market growth. However, high cost of these alternatives may hinder the growth of the market. Moreover, attractive marketing and promotional strategies followed by the companies is likely to gain significant impetus over the coming future.

The global dairy alternative market has been segmented into source, application, distribution channel, and geography. On the basis of source, the classification includes almond milk, soy milk, rice milk, and other sources. The application segment can be sub-segmented into food (yogurt, creamer, spread, tofu, and other foods), and beverages. Also, on the basis of distribution channel the segmentation is given as large retail, small retail, specialty store, and online.
