Abstracts

Global E-Prescribing Market is estimated to reach $2,418 Million by 2024; growing at a CAGR of 20.1% from 2016 to 2024. E-Prescribing is a technology where a physician or practitioners electronically generate and send prescribing to pharmacy. E-Prescribing is used instead of handwritten, calling, and faxed notes in prescribing. It is an automated clinical decision support system which aids in improving accuracy, rising quality, and increasing patient's safety. E-Prescribing enhances efficiency, reduce cost in healthcare, and expand medication adherence. Reducing medical errors and cost are boosting the growth of the market.

The global e-prescribing market is driven by factors such as, healthcare providers collaborating with software companies, improving healthcare infrastructure of emerging economies, rising abuse of controlled substances, and need to reduce risks caused by medical errors. Additionally, necessity to maintain medical records and untapped markets would provide numerous opportunities in coming years. Though, factors such as lack of awareness and essential resources in rural and remote areas and high cost may hinder the adoption among end users.

The global e-prescribing market is segmented into product type, usage mode, component, delivery mode, end-user, and geography. Product type is categorized into
