Abstracts

Global Fish Oil Market is estimated to reach \$2,364 million by 2024; growing at a CAGR of 5.6% from 2016 to 2024. Fish oil is derived from the tissues of oily fish. They contain several important nutrients for humans and animals. Fish oil consist of omega-3 fatty acids such as eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA) and can be consumed as general health supplement. Increasing lifestyle diseases and chronic diseases among consumers has increased the demand for fish oil, in the form of health supplement and functional food. Human consumption, aquaculture and industrial sector are some of the key application areas of dish oil.

Growing aquaculture activities and rising consumer knowledge regarding various health benefits of omega-3 are driving the growth of the fish oil market. Increasing direct human consumption and use of fish oil in cosmetics also fuels the growth of the market. Though, large demand-supply gap and high cost of fish oil can hamper the growth of the market. Nevertheless, European Food Safety Authority (EFSA) and The Food and Drug Administration (FDA) may provide growth opportunities in coming years.
