Abstracts

Global Green Packaging Market is estimated to reach \$244.9 Billion by 2024; growing at a CAGR of 7.2% from 2016 to 2024. Green Packaging uses manufacturing methods, and biodegradable or recyclable materials that causes less impact on the environment. Large amount of wastes and contaminants are being eliminated due to increased transportation of goods from factories to warehouses, and expanding e-commerce. This can be reduced by adopting green packaging such as decreasing packaging content, and use of biodegradable or recyclable packaging materials. Continuous innovations in the field of green packaging is expected to develop enhanced bioplastics, which are capable to withstand thermal or mechanical barriers.

Rising environmental concerns, technological advancements, and scarcity of natural resources are the factors propelling the growth of the global green packaging market. Moreover, rising health awareness, and growing demand for economizing of packaging also drives the growth of the market. Though, variations in prices of raw materials, and high costs involved in recycling process may hamper the market growth. Furthermore, increasing government obligations on the use of plastics and growing e-commerce sector would create future scope for the market.

The global green packaging market is segmented on the basis of packaging type,

application, and geography. Packaging type is bifurcated into recycled content packaging (plastic, glass, paper, plastic, metal, and others), bio-degradable packaging, and reusable packaging (containers, plastic drums, and others).
