Abstracts

Global Instrumented Bearing Market is estimated to reach \$165.1 Billion by 2024; growing at a CAGR of 7.5% from 2016 to 2024. A bearing is a machine component that are used to reduce the friction between moving parts and allow the machines to move at higher speed. These bearings are capable of carrying heavy loads with ease and efficiency. Additionally, they are combined with sensors that enables to measure angular position of rotating ring. The information gathered from these sensors are further used in several applications including adaptive cruise control, anti-lock braking system, and others. Bearings are found in a range of applications including airplanes, automobiles, machine tools, refrigerators, ceiling fans, and many others.

The key drivers of the global instrumented bearing market include increasing demand from aerospace and defense sector, rising need for energy efficient solutions, and growing applications. Though, factors such as easy access to low quality products, and falling market of after sales could restrain the market growth. Additionally, advanced technologies could offer opportunities in years to come.

The global instrumented bearing market is categorized as product type, end user, and geography. Product type segment is bifurcated as roller bearings, plain bearings, ball bearings, and others. End user segment includes farm and garden machinery, aerospace equipment, construction machinery, power transmission equipment, automotive, oilfield machinery, and other machineries.

Based on geographical analysis, instrumented bearing market is classified into North America, Europe, Asia-Pacific, and Rest of the World (RoW). The U.S., Canada, and Mexico are covered under North America wherein Europe covers UK, Germany, France, Italy, and others. Asia-Pacific covers China, India, Japan, South Korea, and others.
