Abstracts

As per the latest report published by Variant Market Research, Global Isostearic Acid Market is estimated to reach \$630 Million by 2024; growing at a CAGR of 8.4% from 2016 to 2024. In terms of volume the market is expected to reach 86 Kilo Tons by 2024. Isostearic acid is a liquid fatty acid formed by the reaction of oleic-acid with a natural mineral catalyst. The branched structure of isostearic acid improves its dispersing power because of which it is used in industrial and cosmetic applications for the stabilization of pigments and mineral particles in oils and solvents. This ingredient acts as emollient, emulsifier or cleaning agents depending on the type of personal care product that are manufactured. Owing to its high thermal, odor, and oxidation stability, these acid finds its application across numerous industries such as lubricants, chemical esters, personal care, textiles, and packaging.

The growth of global isostearic acid is majorly driven by factors such as rising demand of bio-lubricants, growing demand for personal care products, and enlarging end use industries. However, high cost of isostearic acid is expected to restrict the market growth. Besides, growing beauty products market in cooperation with cosmetics globally is expected to open up new growth opportunities for the market in the forecast timeframe.
