Abstracts

Asian cigarette market is forecasted to reach US\$643.5 billion in 2026, experiencing growth at a CAGR of 5.61% during the period spanned 2022-2026. Growth in the Asian cigarette market by value was due to increase in youth population, increase in female smokers and the increase in the stress level experienced by the people encouraging more people to smoke, inflation and the increase in gross domestic income driving the prices of the cigarettes thereby increasing the cigarette market value. However, the market growth would be challenged by increasing penetration of illicit cigarette, next generation products and decreasing number of habitual smokers.

Asian cigarette market by volume is forecasted to decline at a negative CAGR of 0.78%, for the time period of 2022-2026. Decline in the Asian cigarette market by volume is expected due to increasing awareness of the health issues which are driving people to reduce the consumption, rise in number of alternate products like NGP, increase in the awareness through education system, and increase in the prices of the cigarette. The market is anticipated to experience certain trends like increasing preference of flavored cigarettes and increase in advertising campaigns.

In 2021, the dominant share of market was held by China followed by Indonesia, Japan, India, Korea, Philippines, Malaysia and Rest of Asia.
