Digital Signal Processor (DSP) is considered to be one of the fastest-growing sectors of the semiconductor industry. DSP is the core to all communication (wireless, broadband, Voice over Internet Protocol (VoIP), and to all digital multimedia processing (audio, video, image).

In today's electronics industry, there are very few devices that are gaining popularity faster than digital signal processors. Today, telecommunication industry is the fastest growing area for DSP.

In recent times, the number of electronic devices that require the processing of digital data has grown significantly, so has the demand for reliable and ever more sophisticated DSP cores and related algorithms built around them.

The report focuses on the global digital signal processor market – its size, growth rate, trends, end products, etc. New DSP applications have been covered separately in the report. It also covers the future outlook of the DSP market.

The report profiles most of the major industry players, including their financial information and key business strategies.
