## Abstracts

The global additive manufacturing (3D printing) market is expected to reach US\$29.24 billion in 2023, growing at a CAGR of 25.68% in the duration spanning 2019-2023. The factors such as rising adoption of 3D printing, upsurge in number of 3D printer manufacturers, increasing 3D inkjet printhead sales, rapid urbanization and growing awareness about the benefits of 3D printing are expected to drive the market growth. However, growth of the industry will be challenged by intellectual property concerns and 3D printing as security risks. A few notable trends include acceleration of research and development by top ten countries, rise in average selling prices (ASP) of industrial 3D printers, demand of 3D printing in aerospace and automotive industry and ease in the development of customized products.

The global 3D printing market is segmented into Products, Parts & Services and Materials. The product 3D printing is the fastest growing segment in the global 3D printing market across the world, due to the rising demand for advanced printed and graphically designed products. Whereas, Parts & Services segment is emerging gradually with the increase in the application of 3D printing in services sectors.

The fastest growing regional market is North America, due to early-stage adoption of 3D printing technologies and rise in application of 3D printing, specifically in industrial area. Europe and Asia Pacific are also contributing considerably to the global 3D printing market, with the increasing adoption and application of 3D printing in various industries, specifically automobiles and aerospace.
