## **Abstracts**

The global bioprocessing market is expected to record a value of US\$54.52 billion in 2026, growing at a CAGR of 11.49%, for the time period of 2022-2026. The factors such as growing sales of biotech, rising number of clinical trials, rise in cell culture practice, growth in biopharma merger & acquisition deals, growing urbanization and growing awareness about various communicable diseases would drive the growth of the market. However, the market growth would be challenged by waste disposal of single-use equipment and stringent regulations on bioprocessing. A few notable trends may include upsurge in biotech funding, growth in FDA approvals and emergence of various pandemic diseases.

The global bioprocessing industry is rapidly expanding due to the rising demand for biopharmaceuticals, as they are more extensively accepted for the clinical treatment of a wide range of ailments. Unlike small molecule drugs, these biomolecule-based therapeutics, or biologics, are produced using living cells in two distinct phases, called upstream and downstream. Therefore, growing production of wide range of biologics is providing lucrative growth opportunity to the global bioprocessing market.

The fastest growing regional market was North America due to the presence of major biopharmaceutical companies that continue to spend significant amount of funds in the R&D of new novel therapeutics, which is providing scope for the advance market growth.
