Abstracts

Small Domestic Appliances (SDAs) are the devices either portable or semi-portable used for performing daily domestic tasks. SDAs can be classified into three product categories including Cooking & Food Preparation, Coffee Makers and Home & Personal Care.

Coffee makers are the small domestic appliances primarily used for preparing coffee. They are manufactured by using raw materials such as plastic, steel, anodized aluminum and heat-proof glass. They comprise of various components such as electric pump, decanter, micro-processor, grinder, heating element, steam wand, warning block and thermo block. Residential (domestic), commercial and industrial are the major end users of coffee makers. Most commonly demanded types of coffee makers are Espresso Coffee Makers and Filter (Drip) Coffee Makers.

Europe emerged as a major region for coffee makers market, due to increased demand of premium coffee products such as 'Gourmet Coffee' in Western European countries such as the U.K., France, Germany and Spain.

The global coffee makers market is expected to grow with increasing coffee consumption, rising urban population, increasing e-commerce retail sales, increasing disposable income and accelerating economic growth. Key trends of this market includes increasing premium coffee shops in China, rising preference of gourmet coffee in America and growing shift towards fully automatic coffee makers. However, there are some factors which can hinder growth of the market including increasing prices of raw materials and stringent regulations.
