Abstracts

Incontinence refers to the involuntary actions of excretory system of an individual, in general words, involuntary loss of urine and feces which can significantly disrupt the personal, social and professional life of an affected person. Incontinence episodes can range from constant or intermittent dribbling to infrequent, involuntary discharge of large volumes of bodily waste.

Continence refers to the ability to control the untimely discharge of urine and feces. And continence care is a medical field where the doctors help the patients to retain their excretion control over bladder and bowel through giving a suitable course of treatment, emotional support and tips to keep bladder healthy.

Europe is a major contributor to the global continence care market supported by technological innovation and higher penetration of high-end products. Europe is likely to experience further growth of continence care market with increasing prevalence of neurological diseases and spinal injuries and rising demand for technically advanced products for incontinence.

The global continence care market is expected to grow in future due to increasing ageing population, obese population, rising diabetic prevalence, increasing life expectancy and rising spinal cord injury and spina bifida prevalence. Key trends of this market include rising demand for intermittent catheter and higher penetration of high-end products, launch of new products and increasing adoption of home healthcare products. However, there are some factors which can hinder growth of the market including availability of cheap alternatives and lack of awareness about advanced continence care products.
