## **Abstracts**

The global dental implants market is expected to record a value of US\$6.08 billion in 2027, rising at a CAGR of 6.31%, for the time period of 2023-2027. Factors such as increasing geriatric population, growing concern for oral healthcare, expansion of dental service organizations, rising preference for cosmetic dentistry and surging focus on edentulous treatment would drive the growth of the market. However, the market growth would be challenged by shortage of trained dentists and dental hospitals, high cost of dental implant treatment & reimbursement issues and greater risk of tooth loss associated with dental bridges. A few notable trends include increasing spending on dental services, accelerating penetration of digital dentistry, growing application of CAD/CAM technologies and advancements in implant technology in developed countries.

The global dental implants market has been segmented on the basis of material, product and design. On the basis of material, the global market can be bifurcated into Titanium implants, zirconium implants and other implants made of materials such as ceramic and porcelain fused to metal. In terms of the product, the global dental implants market can be divided into endosteal implants, subperiosteal implants, transosteal implants and others. Whereas, the market is divided into Tapered implants and parallel walled implants, in terms of design.

The fastest growing regional market was Europe due to the rising aging population requiring oral care services, increasing demand for cosmetic dentistry & dental aesthetics among patients and growing prevalence of dental ailments across the region along with rising awareness among individuals regarding dental health encouraging them to opt for dental implant treatments.

### Scope of the report:

The report provides a comprehensive analysis of the global dental implants market segmented on the basis of material, product, design and region, with potential impact of COVID-19.

The major regional and country markets (Europe, North America, Asia Pacific, Latin America, Middle East & Africa) have been analyzed.
