## Abstracts

Diabetes mellitus, or simply diabetes, is a chronic disease that occurs when the pancreas is no longer able to make insulin, or when the body cannot make good use of the insulin it produces. Insulin is a hormone made by the pancreas that acts like a key to let glucose from the food we eat pass from the blood stream into the cells in the body to produce energy. All carbohydrate foods are broken down into glucose in the blood. Insulin helps glucose get into the cells. Type 1 diabetes, Type 2 diabetes and Gestational diabetes are the three types of diabetes. There are mainly three types of diabetes treatment which include insulin, oral anti-diabetic drug (OAD) and glucagon-like-peptide-1 (GLP-1).

The report “Global Diabetes Market” provides an in-depth analysis of the global diabetes market, along with an in-depth study of the regional markets. The major trends, growth drivers as well as issues being faced by the industry are being presented in this report. The major players in the industry, Novo-Nordisk, Sanofi-Aventis, Eli Lilly and Takeda are being profiled.

The key factors driving the growth of the diabetes market are growing evidence of insulin therapy, rising healthcare expenditure, rising obese population, increasing urbanization and ageing population. Some of the noteworthy trends and developments of this industry are increasing prevalence of diabetes, rising diabetes cases due to second hand smoke, and rise of impaired glucose tolerance (IGT). However, the expansion of global diabetes market is hindered by increasing treatment cost and lack of sufficient diagnosis and treatment facilities.

By combining SPSS Inc.’s data integration and analysis capabilities with our relevant findings, we have predicted the future growth of the market. We employed various significant variables that have an impact on this industry and created regression models with SPSS Base to determine the future direction of the industry. Before deploying the

regression model, the relationship between several independent or predictor variables and the dependent variable was analyzed using standard SPSS output, including charts, tables and tests.
