Abstracts

The global dry eye disease market is predicted to reach US\$4.28 billion in 2024, witnessing growth at a CAGR of 5.23%, over the period 2020-2024. The factors such as increasing geriatric population, growing burden of diabetes, rising healthcare expenditure, surging prevalence of arthritis and upswing in air pollution are expected to drive the market. A few notable trends include the emerging number of contact lens users, surge in laser eye surgeries, rising screen time and technological advancements and promising pipeline products. However, the market would be challenged by dearth of skilled professionals, increasing popularity of self-medication by patients and stringent regulations.

The global dry eye disease market has been segmented on the basis of type, product, treatment and distribution channel. On the basis of type, the global dry eye disease market can be bifurcated into aqueous & evaporative dry eye disease, evaporative dry eye disease and aqueous dry eye disease. According to products, the global market can be categorized into Restasis, Xiidra, Systane, Refresh and other products. Whereas, depending on the treatment, the global market can be split into anti-inflammatory drugs, artificial tears, punctual plug and other treatments. The global dry eye disease is segmented into retail pharmacies, hospital pharmacies, online pharmacies and others.

The fastest growing regional market is North America due to the rising burden of chronic diseases such as diabetes and rheumatoid arthritis in the region, increasing healthcare expenditure, presence of a well-developed healthcare sector, growing adoption of

prescription dry eye disease drugs in the U.S. and increasing number of approvals for new drugs and devices from the FDA.
