Abstracts

Endoscopy is a procedure to scan and diagnose the patient's body from inside, in which a tube like instrument is put inside the body of the patient through a cut in skin or mouth or anus. This procedure is very much different from procedures like X-ray, CT scan, Ultrasound and other imaging test. Endoscopy is used to diagnose and as well as treat various conditions through keen examination of internal body organs. It has proved to be helpful in many medical conditions, particularly in early detection, prevention, diagnosis, and treatment of cancer.

The global endoscopy market is set to experience favorable growth driven by factors such as growing aging population, rising obese population, increased number of diabetic patients, rising incidence of cancer, growing demand for minimally invasive surgeries and accelerating economic growth. The major trend observed in this market includes technological advancements. However, the growth of this market is constrained by challenges such as associated patient risk, environmental issues and intense competition.

The report "Global Endoscopy Market: Industry Analysis & Outlook (2018-2022)" analyses the development of global market. The major trends, growth drivers as well as issues being faced by the market are discussed in detail in this report. The four major players: Medtronic Plc., Boston Scientific, Olympus Corporation and Fujifilms Holdings Corporation are being profiled along with their key financials and strategies for growth.
