Abstracts

Diagnosis is the identification of the nature and cause of a certain phenomenon. It involves two different types of testing method: in vivo and in vitro diagnostics. In vitro diagnostics (IVD) are the medical tests which are intended to perform diagnoses from sample of body fluids in a controlled environment outside a living organism. In vitro diagnostic (IVD) tests are performed to conduct diagnoses from assays in a test tube, or in a controlled environment outside a living organism.

Molecular Diagnostics is a technology used in the process of in vitro diagnosis. Molecular diagnostics involves the measurement of DNA, RNA, proteins or metabolites in order to detect genotypes, mutations or biochemical changes in the body. Molecular diagnostics market is escalating beyond the identification of infections. It is becoming an essential part of disease management and therapy. The variety of technologies used in molecular diagnostics has transformed clinical laboratory medicine. The market is further expected to see a robust growth with increased research and development.

The global molecular diagnostics market is expected to see innovation driven growth. With recent outbreak of infectious diseases like Ebola and swine flu, they would require accurate diagnostics, which will instigate the growth of the molecular diagnostics technology in the future, thereby posing tremendous growth potential for the market. Asia-Pacific is expected to register the highest growth rate in expansion of molecular diagnostics in the coming years.

The key factors driving growth of the MD market includes fast approvals for companion diagnostics reagents, increase in emergence of infectious disease, innovation and technical development, rising ageing population, and escalating global healthcare

expenditure. However, there are certain factors hindering the growth of the market like high initial cost, obligation of skilled labor, and lack of proper healthcare infrastructure. The major trends featuring the market includes increasing clinical microbiological laboratories in developing nations, next generation sequencing, and increase in sale of point of care devices.

The report offers an in-depth analysis of the Global Molecular Diagnostics Market with focus on Infectious Diseases (HPV/Chlamydia) & Genetic Testing. It covers the regional and global aspect of the market. Competition is concentrated in the hands of few major companies, of which Roche Holding, Abbott Laboratories, Hologic Inc., and Qiagen have been covered in the report.
