Abstracts

Parkinson's Disease (PD) is a chronic and progressive neurodegenerative or movement disorder which involves the malfunction and death of vital nerve cells in the brain, called neurons. Parkinson's primarily affects neurons in an area of the brain called the "substantia nigra". The early signs and symptoms may be mild and may go unnoticed initially. The cause of this disease is mainly unknown with no cure till date but there exist several treatment options such as medications and surgery.

The current treatment market for Parkinson's disease has several unmet needs as no treatment has yet been successful in fully restoring the function that produces dopamine. However, the treatment currently only aims at controlling and relieving symptoms. The Parkinson's disease treatment market remains flooded by both branded and generic drugs. The market is expected to experience fluctuations in branded sales due to patent expiries and subsequent entry of generics in the market. Several biologics are under development for the treatment of Parkinson's along with possibility of developing "Stem Cell" as a treatment therapy.

The Parkinson's disease market is expected to acquire modest growth driven by launch of new therapies and increasing rate of drug treatment due to increasing healthcare expenditure and ageing population. The major growth drivers of the Parkinson's disease market includes rising level of toxin exposure, increasing life expectancy, rising male population worldwide, ageing population, healthcare expenditure and pesticide consumption. However, the growth of the market will also remain challenged by generic erosion, current treatment limitations and increasing risk of developing Melanoma.

The report, "Global Parkinson's disease Market" analyzes the currently prevailing condition of the market along with its future scope of development. The specific markets

of the U.S., the European Union and Japan are being discussed in the report. The major trends, growth drivers as well as issues being faced by the industry are being presented in this report. The major players in the industry are being profiled, along with their key financials and strategies for growth.
