## Abstracts

The global photoresist market is expected to record a value of US\$4.17 billion in 2026, progressing at a CAGR of 4.78%, over the period 2022-2026. Factors such as growing population, increasing penetration of smartphones, accelerating shipments of silicon wafers, rising demand for consumer electronics and surging popularity of wearable devices would drive the growth of the market. However, the market growth would be challenged by fluctuating prices of crude oil, rising concerns regarding occupational and health disorders and limited consumption and taxation policies in emerging economies. A few notable trends include escalating demand for display technology, growing acceptance of nanotechnology, increasing application in semiconductor industry and advancements in material technology.

The global photoresist market has been segmented on the basis of type and applications. On the basis of type, the global market can be bifurcated into ArF Photoresist, KrF photoresist, I-Line photoresist, G-Line photoresist and Extreme Ultraviolet (EUV) photoresist. Whereas, the global photoresist market is divided into semiconductors & ICs, liquid crystal displays (LCDs), printed circuit boards (PCBs) and others, in terms of application.

The fastest growing regional market was Asia Pacific due to the rising production of nm-based chips in the region, emerging technologies such as AI, 5G, and IoT creating the demand for more complex ICs and chips, surge in demand for the high component-density of devices along with growing population and rise in the disposable income.
