Abstracts

The global silver demand is expected to reach 1,196 million ounces in 2026, at a CAGR of 2.97%, for the time period of 2022-2026. While the silver supply is likely to be recorded as 1,061 million ounces in 2026, increasing at a CAGR of 1.24%, during 2022-2026. The factors such as rising sales of jewellery & silverware, growing demand for solar photovoltaic, rising use of silver oxide batteries, increasing manufacturing of electrical equipment and expansion of dental services would drive the growth of the market. However, the market growth would be challenged by volatile prices of silver and environmental impact of silver nanoparticles. A few notable trends may include rising use of silver in auto industry, growing consumption of silver nanoparticles and upsurge in the silver consumption in the U.S.

The silver market is emerging gradually over years and securing its position in financial markets in the modern economy. Given its size and liquidity, silver is clearly becoming a monetary asset for investors. Further, the expanding range of application is making silver highly demanded across various end industries. Silver is massively used in industries like jewellery & silverware, electrical & electronics, photovoltaics, brazing alloys and photography.

The fastest growing regional market was North America due to the massive consumption of silver across various end industries. It was followed by Central & South America as of the emerging regions in the silver market due to the increase in exploration activities for the silver production.
