Abstracts

Spine, also known as vertebral column or back bone, is a series of several irregular bones (vertebrae) located in the back of a human. Spine houses a spinal canal which protects the spinal cord by enclosing it. Spinal cord is a thin and long tubular bundle of nervous tissue and support cells. It acts as a pathway between brain and the body. Spine is segmented into four curves that include cervical curve, thoracic curve, lumbar curve and sacral curve. These curves provide posture to an individual while bending, moving and support the upper body weight. There are seven vertebrae in cervical curve, twelve vertebrae in thoracic curve, five vertebrae in lumbar curve and 5 vertebrae in sacral curve.

Spinal fusion segment has witnessed significant growth in the spine market because of increased cases of severe lumbar and cervical disorders. Regionally, the U.S. is a major contributor to the global spine market supported by technological innovation and higher concentration of major spine solution manufacturing companies. The U.S. is likely to experience further growth of spine market with technological advancements in surgical devices, growing cases of spinal diseases in older populace and rising adoption of spinal fusion.

The global spine market is expected to grow in future due to increasing cases of spinal cord injury, increasing ageing population and obese population, rise in healthcare expenditure, increasing disposable income and rapid urbanization. Key trends of this market include mergers and acquisitions, increasing demand of minimally invasive surgeries, sedentary lifestyle. However, there are some factors which can hinder the market growth including stringent legal norms and high cost and alternative treatments.
