Abstracts

Patient handling equipments have been developed to make patient movement simple and safe. The healthcare industry is filled with different kinds of patient handling equipments. And there is a constant need for new developments in these equipments, resulting into more types of equipments. These patient handling equipments can be placed under four types that include wheelchairs and scooters; medical beds; mechanical and non-mechanical equipments and ambulatory beds. Besides these equipments, some other types of patient handling equipments are also there in the market such as transfer belts, medical bed accessories, etc.

North American healthcare industry is going through various trends such as rising number of medical device companies, increasing share of ageing population in the total populace, increasing incidences of road accidents, and obesity cases. Wheelchairs and scooters market in North America is majorly bringing up the growth of overall patient handling equipment market. All these factors are driving the growth of North American patient handling equipment market. European market for patient handling equipments is also experiencing steady growth in countries like Germany and France.

The Europe and North America patient handling equipment market is expected to grow in future due to increasing ageing population, obese population, rise in healthcare expenditure, increasing disposable income, rising cases of spinal cord injuries, and growing urbanization. Key trends of this market include growing popularity of medical travellers and increasing number of surgical procedures. However, there are some factors which can hinder the market growth including lack of skilled professionals and decreasing number of hospitals.
