Abstracts

The coal industry is expected to face a supply-demand gap in 2022, when domestic coal demand continues to increase, while current supply is not enough to meet demand.

Coal production of our country reached more than 11.5 million tons in Quarter 1, up 3.2% over the same period last year, but this increase has not kept pace with consumption demand

Coal imports face many difficulties when there is a shortage of imported coal supply from major markets such as Australia, Indonesia, and China

Domestic demand for coal will grow strongly when domestic production is restored, expected to reach 92-99 million tons by 2025.

The price of imported coal in 2022 has increased 2.5 - 3 times since the beginning of the year, is expected to continue to increase in the context of the price of gasoline, gas and other energy commodities continuing to escalate
