Abstracts

Although recent economic turmoil has put its stamp upon many industries worldwide, the food high pressure processing (HPP) industry has remained robust and in many, mostly developed countries is expected to show a strong performance. Developed nations are displaying a growing interest in HPP technologies and this can be seen as a great opportunity for many companies to introduce this sophisticated, innovative shelf-life enhancement technique to their production line or try it out on a contract basis, so called HPP tolling. The rest of the world national markets will be largely driven by the emerging economies, mostly BRIC countries where a progressive growth rate is expected. Visiongain calculates that the global food HPP market will reach \$7.34bn in 2013.

About

Avure Technologies, Inc., Matt Rutherford, Senior Vice President

Visiongain sought opinion of Matt Rutherford - Senior Vice President of Avure Technologies, Inc. – US based private company that is specialising in applying high pressure technology to industrial and consumer goods manufacturing. We interviewed Mr. Rutherford in September 2013 and would like to thank him for his time.

Trends and Developments

Visiongain: What would you say are the key trends and developments on the HPP market and why?

Matt Rutherford: I think one of the critical trends is the broadening of the product categories that are adopting HPP as a requirement to participate in their respective food segments. Let me explain: one of the top trends is found in a premium juice category. These are the products that are simply pressed raw or have additives that affectively boost the wellness characteristics of the juice and quite frankly, HPP is extremely well-suited as a non-thermal process technology that preserves the taste, the flavour, but more importantly the vitamin content of the product while providing significant level of food safety.

So, in summery on your question, the trend is obviously the rapid growth of premium juices and wellness juices throughout the world and the use of HPP to bring that exciting product to market and you are looking at a category that is growing in well of excess of 20 % a year at this point. I think this is one of the critical trends.
