## Abstracts

A combination of ageing infrastructure, rising use of natural gas as an energy source, a need to improve distribution efficiency and energy security, and reduce greenhouse gas emissions are all driving capital expenditure growth in the gas utilities infrastructure market. Over the forecast period many regions and countries will experience strong growth in the gas utilities infrastructures market as new gas infrastructure is built to meet rising demand. More established gas markets will need to upgrade ageing and insufficient distribution infrastructure. Visiongain has determined that capital expenditure in the global gas utility infrastructure market in 2012 will reach \$36.13bn

Emerging national gas utility infrastructure markets such as China, India, and Brazil, will drive growth in the market while the US and major European countries will remain central to capital expenditure on gas utility infrastructure over the forecast period to 2012-2022. These major gas using economies will continue to invest heavily in their gas utility distribution networks. Growth in other national and regional markets is expected to increase steadily, as national and regional demand and new discoveries of natural gas lead to greater investment.

The report contains 94 tables, charts and graphs that add visual analysis in order to explain developing trends within the gas utility infrastructure market. Visiongain provides forecasts for the period 2012-2022 in terms of value (US\$) for the global gas utility infrastructure market, as well as for 3 submarkets of the gas utility infrastructure market; Gas Storage Infrastructure, Gas Distribution Pipeline Infrastructure, and Gas Utilities Pressure Reduction Stations.
