Abstracts

The global market for cyber solutions has been a topic of increasing interest in a variety of industries and public sector organisations for several years and for a number of reasons. The first of these is the indisputable rise of cyber crime, malware attack, information theft and hacking which has accompanied the expansion of the internet. Threat of attack via cyberspace has in recent years become a real concern not only of public organisations guarding state secrets, but also of commercial entities seeking to remain profitable.

Whether the threat is from loss of valuable data, disruption to financial services, release of intellectual property, the shutting down of critical national infrastructure or simply the reputational damage of being known to have been compromised, the possibility of cyber attack represents both a danger to national security and a potential source of major losses.

The stakes are high; visiongain has assessed the cyber security market will reach $68.34bn in 2013. As global defence budgets diminish, defence contractors are increasingly taking an interest in the growing area of cyber security through acquisitions and organic growth, which is posing a challenge to incumbent IT security providers.

What makes this report unique?

Visiongain consulted widely with industry experts and has included full transcripts from interviews with BAE Systems Detica, Booz Allen Hamilton and Finmeccanica's Selex ES within this report. As such, our reports have a unique blend of primary and secondary sources providing informed analysis. This methodology allows insight into the key drivers and restraints behind market dynamics and competitive developments,
