Abstracts

Visiongain's new report reveals that the global carbon fibre reinforced plastic (CFRP) composites market will show considerable promise over 2013-2023. The emerging markets are expected to experience growth partly due to the immaturity of the market, combined with favourable economic conditions. The concept of renewable energy is also expected to increase in prominence in some regions and will play a part in galvanizing CFRP composites growth. Competition is likely to increase in these regions due to low production costs, and the influx of multinationals. This will have the added benefit of reducing the costs associated with CFRP and thus will increase the material's competitiveness. The developed markets will experience more modest growth, but the concept of sustainability will be important and will play a large role in driving the market. Visiongain has determined that the value of the global CFRP composites market in 2013 will reach \$20.68bn.
