Abstracts

With a very mature collection of technologies proven in combat by the US, the military man-portable electronics market shows potential for strong growth as other countries seek to modernise their soldiers' equipment. Although the very high end of the market is expected to suffer from budget cuts in the US and Europe as well as the ISAF withdrawal from Afghanistan, simpler devices such as soldier radios, night vision goggles, laser designator and rangefinders, are likely to thrive in markets currently lacking such capabilities. Currently, the man-portable military electronics market is valued by Visiongain at \$2.77bn indicating the considerable business opportunities available.

With the drawdown of US and European involvement in Afghanistan on the horizon, tensions in South East Asia on the rise and financial uncertainty in Europe refusing to abate, today's security environment is extremely complex. Visiongain's report is an in-depth examination of what these trends mean for a market for soldier technology which has seen swift growth in previous years. Visiongain's research has produced a detailed ten-year forecast for the 20 largest national markets in man-portable military electronics, 6 technology submarkets as well as a breakdown of the products and services offered by the top 15 companies active in the market.
