Report Details

Conflicts in Afghanistan and previously Iraq where US and Western-allied forces were engaged, has led to an explosion in the collection of video data. This expansion was driven by the similarly rapid increase in the use of unmanned aerial vehicles (UAV), particularly their use of full-motion video (FMV). As a result, the processing, exploitation and dissemination (PED) of video data from various surveillance platforms has become integral to military operations. Visiongain has determined that the value of the global military video analytics and back-end systems market in 2013 will reach \$3.73bn.

However, with the planned withdrawal of coalition forces from Afghanistan in 2014, which will follow the end of US-led military operations in Iraq in 2011, the urgency of this capability may have come into question. The issue is how much military forces are willing to invest in this increasingly critical technology. Meanwhile, countries not involved in the conflicts in Afghanistan and Iraq are also aware of the advantages of video information and its processing, and are seen to be looking to catch up in terms of capability.

A SWOT analysis

What makes this report unique?

Visiongain consulted widely with industry experts and a full transcript of an exclusive interview is included in the report. As such, our reports have a unique blend of primary and secondary sources providing informed opinion. This approach allows insight into the key drivers and restraints behind contract and programme developments, as well as identifying the technological issues. The report also presents a unique blend of qualitative analysis combined with extensive quantitative data including global, submarket and national markets forecasts from 2013-2023 - all of which highlight strategic business opportunities.
