Abstracts

The extraordinary success of apps such as Foursquare provides a huge subscriber base for location based services, but this popularity has not yet been translated into revenue streams, nor has it reached its full potential. In an LTE age the location based services (LBS) landscape is poised for explosion. This report reveals the opportunities that lie between 2012 and 2017 for all ecosystem members and new market entrants. Visiongain's analysis calculates that location based services revenues will reach \$4.4bn in 2012.

With a proliferation of LBS capable devices flooding the market, developers have a huge user base of potential LBS subscribers. Unlike many technologies, location based services are popular and desirable already - the market requires that developers create apps that capitalise on the untapped potential.

The report details current examples of successful location based applications and services, and analyses each one to reveal the most pertinent aspects of their success and how that service is monetised. Emerging uses that signal potential future opportunities for monetisation are also covered in detail providing a holistic and timely overview of the market. Innovations in location based advertising and marketing also represent significant revenue potential.

What makes this report unique?

Visiongain consulted widely with industry experts involved with location based services. A full transcript from one of these exclusive interviews is included in the report. As such, our reports have a unique blend of primary and secondary sources providing informed opinion. This approach allows insight into the key drivers and restraints behind

technology developments, as well as identifying the leading companies. The report also presents a unique blend of qualitative analysis combined with extensive quantitative data including global, submarket and national markets forecasts from 2012-2022 - all highlighting strategic business opportunities.

Why you should buy Location Based Services 2012-2017: Monetising Opportunities and Challenges
