Report Details

Our new report Magnetic Resonance Imaging (MRI) Systems: Global Market Outlook 2012-2022 covers the trends in the MRI systems market, a promising segment of the diagnostic imaging industry. In addition to the MRI, the diagnostic imaging industry comprises of technology such as the computed tomography (CT) scans, X-ray, ultrasound and nuclear medicine. Magnetic Resonance Imaging (MRI) represents the fastest growing segment of the global medical imaging market, where in response to patient demand, hospitals and healthcare care providers around the world are upgrading their older equipment with state of the art systems. According to our latest pharma report - the global MRI systems market will be worth \$10.4bn by 2022.

Magnetic Resonance Imaging (MRI) Systems: Global Market Outlook 2012-2022 report forecasts the size and value of leading national/regional markets: the US, Europe, Japan, India and China. For each of these, visiongain identifies prevailing trends and strategies that will steer this diagnostic technology over the forecast period. Despite the global recession, which has led to financial cuts in the healthcare sector in many countries, the MRI market remains solid with strong opportunities especially in emerging countries such as India and China. The continued rise in the aging population, coupled with the subsequent rise in the incidence of cancer, cardiovascular and neurological diseases, has fuelled strong demand for highly advanced medical and diagnostic imaging equipment. The MRI systems market continues to grow despite the global economic uncertainty and healthcare cutbacks being witnessed in a number of countries worldwide. This is due in part to emerging clinical applications and the new trend of hybrid technology, which provides systems with the ability to capture images both anatomically and functionally.

Magnetic Resonance Imaging (MRI) Systems: Global Market Outlook 2012-2022 also examines the challenges facing the sector critically, including the high cost and safety issues. The report is developed through a comprehensive review of information sources, both primary and secondary. In our report you find sales forecasts, growth rates and market shares. You also receive qualitative analyses and a review of companies and leading products.
