### Report Details

In 2011, the medical device market worldwide was worth \$266.0bn, with high single-digit growth from the year before. Despite being a vast and mature market, there are number of sectors likely to experience fast growth during the next 10 years. Much of this growth is linked to the prevalence of a number of diseases worldwide, as well as an aging population. The rise in neurological disorders will drive both the diagnostics market and the neurological device market. Changes in wealth and lifestyle globally, particularly in the emerging markets, will lead to a rise in obesity and coronary diseases.

As a result, the medical device market is one of the largest sectors in the global healthcare industry. All sectors of the market have been expanding, but which will grow fastest in years to come? What trends in global disease will shape the industry in the future? How will the principal national markets perform from 2012 to 2022? What will happen to the current leading products? What growth can be expected by emerging markets such as China and India? How will recent Health Care Reform in the US affect the market over the next 10 years? This report will answer those and other crucial questions about this large, and growing, market.
