Abstracts

The oil refinery catalyst market is currently undergoing a period of significant change as demand in the more established refining markets of Europe and North America is fairly stagnant, while high levels of economic growth in emerging markets in Asia-Pacific, the Middle East and South America are leading to increases in refining capacities and a subsequent growth in demand for refinery catalysts. Visiongain has determined that the value of the global oil refinery catalyst market in 2012 will reach \$3.71bn.

The refinery catalyst market will be aided by more stringent regulations regarding vehicle emissions being introduced throughout the world, particularly pertaining to the level of sulfur in gasoline and diesel. Many refiners will be forced to increase their investments in hydroprocessing catalysts in order to meet these more severe regulations. There will also be a mounting shift from the production of light, sweet crude oil to heavier, higher sulfur content (sour) crude oil, again requiring larger quantities and higher-specification petroleum catalysts.

The report contains 225 tables, charts and graphs that add visual analysis in order to explain developing trends within the oil refinery catalyst market. Visiongain provides forecasts for the period 2012-2022 in terms of capital expenditure (US\$) on the global oil refinery catalyst market. In addition, the report includes forecasts and analysis for 7 regional markets, 14 national markets and 5 submarkets over the period 2012-2022. The report also provides profiles of 36 leading companies operating within the market, and includes an exclusive interview with an expert from a principal company in the oil refinery catalyst market, providing key insight alongside visiongain's analysis.
