Report Details

Diesel engines are becoming an increasingly attractive solution to high oil prices and the resulting high running costs of passenger cars and LDVs. Diesel engines are 20-40% more efficient than petrol engines depending on vehicle size and performance. Higher efficiency results in lower fuel consumption and lower carbon dioxide emissions for comparable performance. Diesel engines thus offer a solution to both economic and environmental challenges in the automotive sector. As a consequence Visiongain has determined that the total number of unit sales in the passenger car & LDV diesel engine market in 2013 will reach 11.54m.
