About

Orchid Acquisition Signalling an Indian Strategy for Hospira?

In August 2012, Hospira acquired Orchid Chemicals & Pharmaceuticals' penem and penicillin API business for just over \$202m in cash. Orchid is an Indian company, and Hospira's involvement with Orchid since 2010 is an indication the company will be expanding its operations in India in the near future. Hospira also acquired Javelin Pharmaceuticals in 2010, with the intent of using synergies between its leading Precedex product and Javelin's post-operative pain management candidate drug Dyloject. Hospira also entered into collaborative agreements with DURECT Corporation and Kiadis Pharma. Hospira has also established a licensing deal for a ChemGenex oncology product candidate, and has acquired facilities and product rights in the biosimilars field from PLIVA Hrvatska, Human Genome Sciences and Celltrion. It has a joint venture (Zydus Hospira Oncology) with Cadila Healthcare.

Growth Forecast for Hospira Generics, 2013-2023

Visiongain believes Hospira's generics business will achieve a 2012-2017 CAGR of 3% and reach sales of \$2550m in that year. The relatively slow growth will result from increasing competition in the injectables segment, which has been targeted by multiple companies seeking opportunities in speciality generic pharma sectors. However, opportunities in new markets including India will see Hospira's generics business (though the company's other businesses may perform more strongly), reaching revenues of \$3437m by the end of the forecast period, with a five-year CAGR of 5%.
