Report Details

The world aluminium foil packaging market will exhibit considerable growth opportunities over the next decade. The majority of this growth is expected from the emerging markets and this will be due to the high level of economic growth in these regions. There will also be an increase in disposable income and consumers will increase the quality and quantity of the products that they consume. The aluminium foil packaging market is quite immature in these regions as the transition from fresh foods to packaging has only been relatively recent. The increase in competition due to low cost labour also means that producers will be faced with a wide variety of products from which to choose from and this will result in producers seeking new and inventive ways of differentiating their aluminium foil products. Whilst the growth in the developed markets is not expected to be as strong as in the developing markets, the prominence of sustainability will be one of the driving forces behind growth in the aluminium foil packaging market. Visiongain has determined that the world aluminium foil packaging market in 2013 will reach 3.82MT.
